Paper 2

For examination from 2021

MARK SCHEME

Maximum Mark: 75

Specimen

This document has **12** pages. Blank pages are indicated.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks**(not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question(however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer		Marks

Name of parameter passing method	Value output	Explanation									
(Call) by reference	5	<ul style="list-style-type: none"> A <u>pointer</u> to address of the variable is passed. <u>Original variable is changed</u> when parameter changed in called module. 									
(Call) by value	4	<ul style="list-style-type: none"> A <u>copy</u> of the variable itself is passed. <u>Original variable not changed</u> when parameter changed in called module. 									
4(b)	<ul style="list-style-type: none"> Procedures <u>Local</u> variable <p>One mark per item</p>	2									

Question	Answer	Marks
5(a)	<p>Pseudocode:</p> <pre> TYPE StockItem DECLARE ProductCode : STRING DECLARE Price : REAL DECLARE NumberInStock : INTEGER ENDTYPE (allow END) Mark as follows: • One mark for TYPE and ENDTYPE • One mark for Productcode • One mark for Price and NumberInStock </pre>	3
5(b)	<p><u>DECLARE Stock : ARRAY [1:1000] OF StockItem</u></p> <p>One mark per underlined phrase</p>	3
5(c)	<p>Stock[20].Price ← 105.99 Stock[20].NumberInStock ← Stock[20].NumberInStock + 12</p> <p>One mark per statement</p>	2

Question	Answer	Marks
5(d)	<p>Pseudocode:</p> <pre> DECLARE n : INTEGER FOR n ← 1 to 1000 IF Stock[n].Price >= 100 THEN OUTPUT "ProductCode: " & Stock[n].ProductCode " Number in Stock: " & Stock[n].NumberInStock ENDIF NEXT </pre> <p>One mark for each of:</p> <ul style="list-style-type: none"> • Loop through all elements of the array • Check Price > 99.99 • OUTPUT of 2 fields ... • ... with suitable supporting text text <p>(Or could ask for tabular form with column headers)</p>	4

Question	Answer	Marks
6(a)	<pre> Pseudocode solution: FUNCTION ValidatePassword(Pass : STRING) RETURNS BOOLEAN DECLARE LCaseChar, UCaseChar, NumChar, n : INTEGER DECLARE NextChar : CHAR DECLARE ReturnFlag : BOOLEAN ReturnFlag ← TRUE LCaseChar ← 0 UCaseChar ← 0 NumChar ← 0 n ← 0 WHILE n <= LENGTH(Pass) AND ReturnFlag = TRUE NextChar ← MID(Pass,n,1) IF NextChar >= 'a' AND NextChar <= 'z' THEN LCaseChar ← LCaseChar + 1 ELSE IF NextChar >= 'A' AND NextChar <= 'Z' THEN UCaseChar ← UCaseChar + 1 ELSE IF NextChar >= '0' AND NextChar <= '9' THEN NumChar ← NumChar + 1 ELSE ReturnFlag ← False //illegal character ENDIF ENDIF ENDIF n ← n + 1 ENDWHILE </pre>	9

Question	Answer	Marks
6(a)	<pre> IF LCaseChar > 1 AND UCaseChar > 1 AND NumChar > 2 AND ReturnFlag THEN ReturnFlag ← TRUE ENDIF RETURN (ReturnFlag) ENDFUNCTION </pre> <p>1 mark for each of the following:</p> <ol style="list-style-type: none"> 1 Correct Function heading (including parameter) and ending 2 Declaration and initialisation of local counter integer variables 3 Correct FOR loop 4 Picking up <code>NextChar</code> from <code>InString</code> 5 Correct check and increment for lower case 6 Correct check and increment for upper case 7 Correct check and increment for numeric 8 Correct check for invalid character 9 Correct final format check and returning correct Boolean value 	
6(b)(i)	<p>Password1:</p> <p>Any valid string consisting of:</p> <ul style="list-style-type: none"> • at least 2 uppercase alphabetic • at least 2 lowercase alphabetic • at least 3 numeric characters • No other characters <p>e.g.: 'ABcd123'</p>	1

Question	Answer	Marks
6(b)(ii)	Modify Password1 for each rule: Test string: <ul style="list-style-type: none"> • Invalid passwords <ul style="list-style-type: none"> – Lower case characters (e.g. 'ABc123') – Upper case characters (e.g. 'Acd123') – Numeric characters (e.g. 'ABcd12') • Containing an invalid character (e.g. 'ABcd12+3') Mark as follows: One mark for correct invalid string + reason (testing <i>different</i> rules of the function); no half marks Each test string must only break a single rule	4
6(b)(iii)	White-box	1
6(b)(iv)	One mark per bullet: <ul style="list-style-type: none"> • Testing may be carried out before the modules are developed // not ready for full testing • Module stubs contain simple code to provide a known response // temporary replacement for a called module/return a fixed value/output a message to confirm the module has been called 	2

Question	Answer	Marks
7	<p>Pseudocode :</p> <pre> PROCEDURE LogEvents () DECLARE FileData : STRING DECLARE ArrayIndex : INTEGER OPENFILE "LoginFile.txt" FOR APPEND FOR ArrayIndex ← 1 TO 500 // 0 TO 499 IF LogArray[ArrayIndex]<> "Empty" THEN FileData ← LogArray[ArrayIndex] WRITEFILE "LoginFile.txt", FileData ENDIF NEXT CLOSEFILE "LoginFile.txt" ENDPROCEDURE </pre> <p>1 mark for each of the following:</p> <ol style="list-style-type: none"> 1 Procedure heading and ending (ignore any input parameters but don't allow a return value) 2 Declare ArrayIndex (any name) as integer 3 Open file LoginFile for append 4 Correct loop 5 Extract data from array in a loop 6 Check for unused element in a loop 7 Write data to file in a loop 8 Close the file outside the loop <p>Allow single write to file outside loop if complete string built within loop</p>	8
