

## Cambridge International AS & A Level

---

PSYCHOLOGY

9990/42

Paper 4 Specialist Options: Application

May/June 2021

MARK SCHEME

Maximum Mark: 60

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

---

This document consists of **25** printed pages.

**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**Social Science-Specific Marking Principles  
(for point-based marking)****1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require *n* reasons (e.g. State two reasons ...).
- d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

**2 Presentation of mark scheme:**

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

**3 Annotation:**

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

<b>Section A: Stimulus (Generic response descriptor)</b>		
(a)	0–2	<b>1 mark</b> for basic answer e.g. identification. <b>1 mark</b> for elaboration/example.
(b)	0–4	Questions have one or two requirements <b>If 1 mark for one aspect: [1 mark max]</b> 1 mark for identification or statement. <b>If 2 marks for two aspects: [2 + 2 marks]</b>
(c)	0–4	<b>1 mark</b> basic answer. <b>2 marks</b> elaboration ×2. <b>If 4 marks for one aspect: [4 marks]</b> <b>1–2 marks</b> basic answer. <b>3–4 marks</b> detailed answer/elaboration. Partial answers score half marks (i.e. 4 to 2 or 2 to 1)
(d)	0–5	Question requires <b>discussion</b> . Question always <b>plural</b> of each argument. Question always requires conclusion. <b>1 mark</b> for each for/against argument (however detailed) up to 4 max. <b>1 mark</b> for conclusion. <b>NB</b> If three (or more) arguments for one side, best two credited. If one side only, max 2 marks.
0	0	No response worthy of credit.

<b>Section B: Design a study question part (a) (Generic response descriptor)</b>		
<b>Level</b>	<b>Marks</b>	<b>Level Descriptor</b>
4	9–10	<ul style="list-style-type: none"> <li>The design is appropriate to the named investigation and is based on thorough psychological knowledge.</li> <li>The design is accurate, coherent and detailed, and it tests the proposed investigation competently.</li> <li>Four or five design features are included. The features are clearly applied to the design throughout the answer and the candidate clearly understands the main features involved in designing an investigation.</li> <li>The response has proposed an appropriate design, has applied a range of relevant methodological design features with competence and shown clear understanding.</li> </ul>
3	7–8	<ul style="list-style-type: none"> <li>The design is appropriate to the named investigation and is based on good psychological knowledge.</li> <li>The design is accurate, coherent and detailed, and it tests the proposed investigation competently.</li> <li>Two or three design features are included. The features are often applied to the design and the candidate shows good understanding in places.</li> <li>The response has proposed an appropriate design, has applied some relevant methodological design features and has shown good understanding.</li> </ul>
2	4–6	<ul style="list-style-type: none"> <li>The design is mostly appropriate to the named investigation and is based on psychological knowledge.</li> <li>The design is mostly accurate, coherent and detailed in places and it tests the proposed investigation.</li> <li>Design features are limited in their understanding.</li> </ul>
1	1–3	<ul style="list-style-type: none"> <li>The design may not be appropriate to the named investigation (wrong method or incorrect variables)</li> <li>use of terminology is sparse or absent. Basic psychological understanding is shown.</li> <li>The design lacks coherence and is limited in understanding.</li> <li>One or two appropriate design features are identified but incorrectly applied.</li> <li>The response lacks detail.</li> </ul>
0	0	<ul style="list-style-type: none"> <li>No response worthy of credit. The candidate describes the study listed on the syllabus.</li> </ul>

<b>Section B: Explain a study question part (b) (Generic response descriptor)</b>		
<b>Level</b>	<b>Marks</b>	<b>Level Descriptor</b>
3	6–8	<ul style="list-style-type: none"> <li>• Quality and depth of explanation is thorough.</li> <li>• Description of knowledge is accurate, coherent and detailed.</li> <li>• Use of terms is accurate and use of psychological terminology is comprehensive.</li> <li>• Understanding of methodology (such as elaboration, use of example, quality of description) is very good.</li> <li>• The design is effectively explained in relation to the topic area.</li> <li>• There is a balance of methodology and topic area/relevant study knowledge.</li> </ul>
2	4–5	<ul style="list-style-type: none"> <li>• Quality of explanation and depth of explanation is competent.</li> <li>• Description of knowledge is mainly accurate, coherent and reasonably detailed.</li> <li>• Use of terms is mainly accurate and use of psychological terminology is competent.</li> <li>• Understanding of methodology (such as elaboration, use of example, quality of description) is good.</li> <li>• The design is adequately explained in relation to the topic area.</li> <li>• There is an imbalance of methodology and topic area/relevant study knowledge.</li> <li>• Max 5 marks if only methodological or psychological decisions.</li> </ul>
1	1–3	<ul style="list-style-type: none"> <li>• Quality of explanation and depth of explanation is basic.</li> <li>• Description of knowledge is often accurate, generally coherent, but lacks detail.</li> <li>• Use of terms is basic and use of psychological terminology is adequate.</li> <li>• Understanding of methodology (such as elaboration, use of example, quality of description) is limited.</li> <li>• The design is poorly explained in relation to the topic area.</li> <li>• There is an imbalance of methodology and topic area/relevant study knowledge.</li> </ul>
0	0	<ul style="list-style-type: none"> <li>• No response worthy of credit</li> </ul>

Section C: Essay/Evaluate (Generic response descriptor)		
Level	Marks	Level Descriptor
<p><b>Note:</b> Questions are always worded in the same way: ‘to what extent do you agree with this statement? Use examples of research you have studied to support your answer’. However, the words ‘research’ must be taken in the widest sense: (i) different examples can be used from the same piece of research; (ii) examples from different pieces of research; (iii) examples from methodology, such as a specific method or technique; (iv) examples from methodological issues such as ethics, generalisations, quantitative/qualitative data; psychological versus physiological, etc. (v) examples of debates and issues such as reductionism &amp; holism; individual &amp; situational, etc.</p>		
4	10–12	<ul style="list-style-type: none"> <li>• <b>Both sides</b> of the argument are considered and are relevant to the question.</li> <li>• <b>Appropriate examples</b> are included which fully support both sides.</li> <li>• Discussion is <b>detailed</b> with <b>good understanding</b> and clear expression.</li> <li>• A conclusion is drawn with appropriate justification.</li> </ul>
3	7–9	<ul style="list-style-type: none"> <li>• <b>Both sides</b> of the argument are considered and are relevant to the question. They may be <b>imbalanced</b> in terms of quality or quantity.</li> <li>• <b>Some examples</b> are included, are appropriate and often support both sides.</li> <li>• The answer shows good discussion with reasonable understanding.</li> <li>• A basic conclusion is drawn with little or no justification</li> </ul>
2	4–6	<ul style="list-style-type: none"> <li>• Reasons are limited to <b>one side</b> of the argument.</li> <li>• <b>Limited</b> reference to <b>examples</b>, or <b>lack of detail</b>.</li> <li>• The answer shows <b>some understanding</b>.</li> <li>• There is no conclusion.</li> </ul>
1	1–3	<ul style="list-style-type: none"> <li>• Anecdotal discussion, <b>brief detail</b>, minimal relevance. Very <b>limited range</b>.</li> <li>• Discussion may be <b>inaccurate</b> or incomplete.</li> <li>• Describes (and evaluates) topic area study(s), making only indirect reference to the question.</li> </ul>
0	0	<ul style="list-style-type: none"> <li>• No response worthy of credit.</li> </ul>

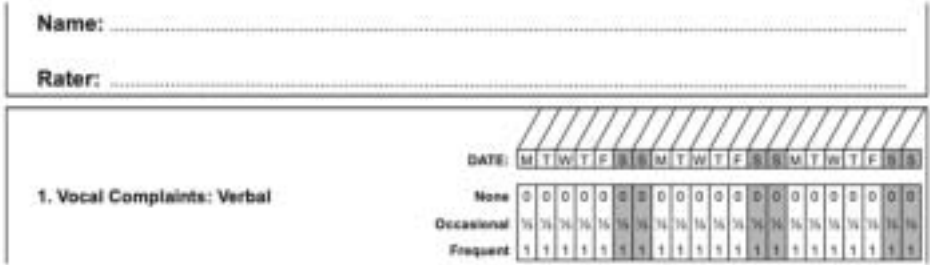

Question	Answer	Marks
<b>Section A: Stimulus question Psychology and abnormality</b>		
1	<p><b>Three comments about electro-convulsive therapy (ECT):</b></p> <p><b>‘It was the best thing that my wife could have had at that time; a good decision by the doctors after drugs had failed.’</b></p> <p><b>‘It was a positive experience; worked well for my schizophrenia.’</b></p> <p><b>‘I was able to go home after five months of inpatient stay as a result of ECT, after years of unsuccessful psychological treatment.’</b></p>	
1(a)	<p><b>Outline the procedure of electro-convulsive therapy (ECT).</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• Muscle relaxant given</li> <li>• Electricity applied bilaterally or unilaterally</li> <li>• Patient convulses/has seizures (twitches because of muscle relaxant)</li> <li>• Patient is unconscious, then wakes and recovers.</li> <li>• Applied once or twice a week for several weeks.</li> </ul> <p><b>Marks: 1 mark</b> for each correct point to 2 max.</p>	<b>2</b>
1(b)(i)	<p><b>Outline <u>one</u> biochemical treatment for schizophrenia. [2]</b></p> <p><b>Most likely answer</b> Biochemical: the giving of drugs/prescribed medication. Drugs such as:</p> <ul style="list-style-type: none"> <li>• antipsychotics/neuroleptics e.g. chlorpromazine</li> <li>• atypical antipsychotics block dopamine receptors</li> <li>• ‘third generation’ e.g. aripiprazole</li> </ul> <p><b>Marks:</b> 1 mark basic answer (‘giving drugs/identified brand name/identified type’ all 1 mark, but two identifications does not = 2 marks) 2 marks detailed answer/elaboration/example (how these drugs work or ‘generations’). NB: also credit side effects, such as TDK as elaboration.</p>	<b>2</b>
1(b)(ii)	<p><b>Give <u>one</u> advantage of this biochemical treatment for schizophrenia.</b></p> <ul style="list-style-type: none"> <li>• Drugs are effective. They work, they reduce symptoms of schizophrenia.</li> <li>• Use of drugs can help to restore the ‘chemical balance’</li> <li>• Drugs can be given on a fixed schedule (by the patient or by therapist)</li> <li>• Drugs require very little effort by the patient (are ‘quick’ and ‘easy’, they just swallow a pill) unlike non-chemical therapies</li> <li>• Drugs are cost effective (0 mark) but if explained e.g. ‘compared to ECT, or CBT’ (2 marks)</li> </ul> <p><b>Marks:</b> 1 mark basic answer (basic advantage), 2 marks detail/elaboration/example Note: if identify ‘time and cost’ = 0 marks, but if explained, then 2 marks.</p>	<b>2</b>

Question	Answer	Marks
1(c)	<p><b>Outline <u>two</u> psychological treatments for schizophrenia.</b></p> <p><b>Most likely answer</b></p> <ul style="list-style-type: none"> <li>• token economy (Paul and Lentz, 1977) use of operant conditioning (desirable behaviours positively reinforced) using a token. Behaviours such as self-care, attending therapy and engaging socially. Tokens later exchanged for clothing, TV use, sweets and cigarettes.</li> <li>• cognitive-behavioural therapy (Sensky et al., 2000) compared CBT group with control, randomly allocated. 90 patients aged 16–60 received average of 19 sessions. CBT = engaging with patient, discussing disorder, symptoms and challenged beliefs about voices.</li> </ul> <p><b>Marks:</b> 1 mark basic answer (CBT is a ‘talking therapy’), 2 marks detail/elaboration/example ×2</p>	<b>4</b>
1(d)	<p><b>Discuss the strengths and weaknesses of ECT as a treatment for schizophrenia. You should include a conclusion in your answer.</b></p> <p><b>Marks:</b> 1 mark for each strength/weakness (however basic/detailed) <b>which is related/linked</b> to the question (max 4 marks). 1 mark for conclusion. <b>Conclusion:</b> any appropriate conclusion drawn from the discussion that has been presented. 1 mark if appropriate. A conclusion is a ‘decision reached by reasoning’ and so a summary of points already made scores 0 marks.</p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <p>Strengths:</p> <ul style="list-style-type: none"> <li>• It is a medical treatment, prescribed by and applied by medical doctors</li> <li>• It is necessary for patients where all other medications have not worked</li> <li>• It successfully treats many patients both with schizophrenia and depression</li> </ul> <p>Weaknesses:</p> <ul style="list-style-type: none"> <li>• How ECT works still isn’t known</li> <li>• ECT can be given to a person to treat schizophrenia without their consent in some countries (person is not ‘of sound mind’)</li> <li>• ECT has side-effects, both long and short term: loss of memory (temporary or worse), aspects of short-term or long-term memory. In people with other conditions it may affect the central nervous system and cardiovascular system.</li> </ul> <p><b>Note:</b> do not credit ethics. This is not a study where ethics applies. It is real life, where ECT can be given without consent (‘not of sound mind’ etc.)</p>	<b>5</b>

Question	Answer	Marks
2	<p><b>Newspaper headline: Your brain goes shopping.</b></p> <p><b>You go shopping and you see a product. By the time you decided to buy it, some brain regions already knew what you were buying and how much it cost. These brain regions are the neural predictors of purchases, studied by Knutson et al. (2007).</b></p>	
2(a)	<p><b>Identify <u>two</u> brain regions Knutson et al. found to be predictors of purchases.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited): Quoting study</p> <ul style="list-style-type: none"> <li>• product preference activated the <i>nucleus accumbens (NAcc)</i>, while excessive prices activated the <i>insula</i> and deactivated the <i>mesial prefrontal cortex (MPFC)</i> prior to the purchase</li> </ul> <p><b>Marks:</b> 1 mark for identification e.g. accumbens/NAcc ×2. <b>Note:</b> ‘prefrontal cortex’ 0 marks or any similarly general brain region.</p>	<b>2</b>
2(b)	<p><b>Outline the novel 'SHOP' task used when each participant had their brain scanned.</b></p> <p><b>Definitive answer</b> (Quoting study)</p> <ul style="list-style-type: none"> <li>• the novel SHOP (‘Save Holdings Or Purchase’) task, consisted of a series of trials of identical temporal structure, in which subjects could purchase products.</li> <li>• Subjects saw a labelled product (4 secs), saw the product’s price (4 secs), and then chose either to purchase the product or not (by selecting either ‘yes’ or ‘no’ presented randomly on the right or left side of the screen; (4 secs), before fixating on a crosshair (2 secs) prior to the onset of the next trial.</li> </ul> <p><b>Marks:</b> 1 mark basic answer, 2 marks detailed answer/elaboration or use of example.</p>	<b>4</b>
2(c)(i)	<p><b>Suggest <u>one</u> reason why the findings of this study can be generalised.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• The brain regions activated by the task, the NAcc, insula and MPFC, will be the same brain regions activated in every participant whatever their culture.</li> <li>• People judge the quality of product and price whatever it is and wherever they are.</li> <li>• Data (findings) is objective; fMRI scanners were used.</li> <li>• Brain is physiological same in all people (1 mark) all people have NAcc, insula and MPFC (2 marks)</li> </ul> <p><b>Marks:</b> 1 mark for reason, 2 marks linked to study. <b>Note:</b> allow wide interpretation of ‘findings’. ‘Large sample’ = 0 marks</p>	<b>2</b>

Question	Answer	Marks
2(c)(ii)	<p><b>Suggest <u>one</u> reason why the findings of this study cannot generalised.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• Judging products and price would differ from culture to culture</li> <li>• The products used in the Knutson et al. study might not be available in all cultures.</li> <li>• All participants were right-handed. What about left-handed people?</li> <li>• Shopping is a real-world task; shopping in a scanner/laboratory is not.</li> </ul> <p>Note: 'Only 26 subjects' is not correct because the brain region activated will be the same/is physiological. Where the study was conducted/sample from also no credit unless full justification.</p> <p><b>Marks:</b> 1 mark basic answer, 2 marks linked to study <b>Note:</b> allow wide interpretation of 'findings'</p>	<b>2</b>
2(d)	<p><b>Discuss the advantages and disadvantages of using brain scans to gather data about consumer decision-making. You should include a conclusion in your answer.</b></p> <p><b>Marks:</b> 1 mark for each advantage/disadvantage (however basic/detailed) <b>which is related/linked</b> to the question (max 4 marks). 1 mark for conclusion. <b>Conclusion:</b> any appropriate conclusion drawn from the discussion that has been presented. 1 mark if appropriate. A conclusion is a 'decision reached by reasoning' and so a summary of points already made scores 0 marks.</p> <p><b>Most likely answer</b> (other appropriate responses to be credited, such as eye movement patterns):</p> <p>Advantages</p> <ul style="list-style-type: none"> <li>• Scans are scientific, producing objective data about consumer decision-making</li> <li>• Scans can tell us exactly what part of the brain is responsible for what (the NAcc, insula and the MPFC)</li> <li>• Brain function is the same in everyone, a cultural universal.</li> </ul> <p>Disadvantages</p> <ul style="list-style-type: none"> <li>• Brain scans usually lack ecological validity: tasks done in a scanner rather than real world.</li> <li>• Tasks are usually simple and exclude all the other factors that contribute to a sale: retail ambience; sales techniques etc. They are reductionist.</li> <li>• Scans involve anxiety because of unknown procedure which are not usually part of shopping.</li> </ul>	<b>5</b>

Question	Answer	Marks
3	<p><b>This pain scale is administered by an observer of a person who is experiencing pain. One of the categories used by the observer is shown in Fig. 3.1.</b></p>  <p style="text-align: center;"><b>Fig. 3.1 An extract from a version of the UAB scale</b></p>	
3(a)(i)	<p><b>Identify <u>two</u> categories included in the UAB scale, other than ‘vocal complaints: verbal’.</b></p> <p><b>Definitive answers (from study):</b></p> <ul style="list-style-type: none"> <li>• non-verbal vocal (0 marks) non-verbal vocal complaints (1 mark) or with groans moans gasps etc. (1 mark)</li> <li>• down time (time spent lying down because of pain per day from 8 AM to 8 PM)</li> <li>• facial expressions (0 marks) facial grimaces or similar (1 mark)</li> <li>• standing posture (1 mark) but ‘body posture’ (0 marks)</li> <li>• mobility (0 marks) but ‘moves to try to reduce pain’, or ‘relaxes a limb’ (1 mark)</li> <li>• body language (0 marks) with example e.g. clutching rubbing site (1 mark)</li> <li>• use of visible support equipment (braces crutches cane leaning on furniture TENS etc.)</li> <li>• stationary movement (ability to stay still)</li> <li>• medication use/needed</li> </ul> <p><b>Marks: 1 mark</b> for correct identification ×2 Note: don’t credit ‘general responses’ unless they are listed above. ‘facial expression’ = 0; body posture = 0</p>	<b>2</b>
3(b)(i)	<p><b>Explain what makes the UAB scale in Fig. 3.1 a longitudinal measure.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• chronic pain is recorded over a period of time and tracks the pain change (or not) for an individual for up to three weeks (another sheet can be used for longer periods).</li> <li>• Stimulus has measure: ‘days of the week / three weeks’ which can be credited</li> </ul> <p><b>Marks:</b> 1 mark basic (e.g. tracks pain over time; administered over time) 2 marks elaboration (e.g. it is chronic pain; pain in same individual; some aspect of UAB included)</p>	<b>2</b>

Question	Answer	Marks
3(b)(ii)	<p><b>Explain the usefulness of a longitudinal measure in relation to pain.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• can see improvement (or not) in treatment (1 mark); that the patient is recovering (1 mark) which would not be possible with any other measure unless the measure was repeated (e.g. give MPQ on two different occasions) (+1 mark); any appropriate example in relation to pain (+ 1 mark)</li> </ul> <p><b>Marks:</b> 1 mark basic answer, 2 marks detailed answer/elaboration, or use of example.  <b>Note:</b> Q is 'a longitudinal measure' so other measures are creditworthy. 0 marks for anecdotal.</p>	<b>2</b>
3(c)	<p><b>Suggest <u>two</u> ways in which pain can be assessed using a self-report questionnaire.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• self-report assessment questionnaire (clinical interview)</li> <li>• psychometric measures (McGill pain questionnaire MPQ)</li> <li>• psychometric measures (paediatric pain questionnaire PPQ)</li> </ul> <p><b>Marks:</b> 1 mark basic answer (identification e.g. MPQ), 2 marks detail/elaboration/example.  <b>Note:</b> 1 mark max for Wong-Baker 'faces' scale and any visual rating scale because not strictly questionnaires but are self-report measures.  <b>Note:</b> 'anecdotal' questionnaires can receive full credit, but only 1 mark if visual rating type.</p>	<b>4</b>

Question	Answer	Marks
3(d)	<p><b>Discuss the advantages and disadvantages of pain measures that are observed independently of the person who is experiencing the pain. You should include a conclusion in your answer.</b></p> <p><b>Marks:</b> 1 mark for each advantage/disadvantage (however basic/detailed) <b>which is related/linked</b> to the question (max 4 marks). 1 mark for conclusion.</p> <p><b>Conclusion:</b> any appropriate conclusion drawn from the discussion that has been presented. 1 mark if appropriate. A conclusion is a ‘decision reached by reasoning’ and so a summary of points already made scores 0 marks.</p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <p>Advantages</p> <ul style="list-style-type: none"> <li>• Person observing will be a medical specialist</li> <li>• Person observing will observe many people (an expert in pain observation)</li> <li>• Person observing will know categories and apply them consistently and objectively</li> </ul> <p>Disadvantages</p> <ul style="list-style-type: none"> <li>• Person observing is not experiencing the pain of the person being observed.</li> <li>• Person observing does not ask the person experiencing pain about their pain</li> <li>• Observations are done without the person’s knowledge</li> </ul>	5

Question	Answer	Marks
4	<p><b>Heifetz (1997) proposes a ‘modern’ theory of adaptive leadership, and suggests that ‘getting on the balcony’ to see the whole organisation is more effective than seeing a specific part of one work process.</b></p>  <p><b>Fig. 4.1 ‘getting on the balcony’</b></p>	
4(a)	<p><b>Explain <u>one</u> principle from adaptive leadership, other than ‘getting on the balcony’.</b></p> <p><b>Definitive answer:</b> Adaptive leadership is the practice of mobilising people to tackle tough challenges and thrive. It is about organisational change. The six principles are:</p> <ul style="list-style-type: none"> <li>• Successful adaptation builds on the past</li> <li>• Adaptive leadership is specifically about change that enables the capacity to thrive</li> <li>• Adaptation occurs through experimentation</li> <li>• Adaptation relies on diversity</li> <li>• New adaptations significantly displace, reregulate, and rearrange.</li> <li>• Adaptation takes time</li> </ul> <p>In addition, an alternative five can be credited:</p> <ul style="list-style-type: none"> <li>• Identify the challenge</li> <li>• Regulate distress</li> <li>• Maintain disciplined action</li> <li>• Give work back to employees</li> <li>• Protect leadership voices from below</li> </ul> <p><b>Marks: 1 mark</b> basic answer (identification of one of above), <b>2 marks</b> detailed answer/elaboration/example.</p>	<b>2</b>
4(b)(i)	<p><b>Explain what is meant by the reductionism versus holism debate.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited): Reductionism: explaining complex psychological phenomena by reducing them to component parts. Holism: taking into account all the components; the whole is greater than the sum of the parts.</p> <p><b>Marks: 1 marks</b> for reductionism (basic) and 1 mark for holism (basic).</p>	<b>2</b>

Question	Answer	Marks
4(b)(ii)	<p><b>Suggest how adaptive leadership shows holism rather than reductionism.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited): Being holist is 'taking time on the balcony'. Quote: 'Heifetz highlights the importance of spending time on the balcony as well as on the dance floor. This is about getting perspective: who is dancing with whom, what are the patterns to the dance. It is about learning from a broader, birds-eye perspective. In complex adaptive challenges we easily get caught up in frenetic activity on the dance floor, lose critical perspective and miss things. Often the more pressing and complex a situation the less likely we are to take time out on the balcony, concentrating rather on feverish activity to try to change things. Yet the more complex a problem, the more critical is balcony time.'</p> <p><b>Marks: 1 mark</b> basic answer (considering how all the parts work together), <b>2 marks</b> detailed answer/elaboration/example (getting on the balcony to 'see the whole')</p>	2
4(c)	<p><b>Suggest <u>two</u> ways in which adaptive leadership differs from 'traditional' leadership.</b></p> <p><b>Note:</b> 'Traditional' leadership includes universalist and behavioural theories <b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• Traditional: authority figure giving orders. Adaptive: helping workers to change and adapt.</li> <li>• Traditional: maintains traditions. Adaptive: removes traditions. Emphasis is on change.</li> <li>• Traditional: uses skills workers already have. Adaptive: workers learn new skills to adapt.</li> <li>• Traditional: uses long-established solutions to problems. Adaptive: tries new solutions</li> <li>• Traditional: useful in times of certainty. Adaptive: useful in times of uncertainty</li> </ul> <p><b>Marks:</b> 1–2 marks for each answer ×2. Answer must have both sides to score both marks. 'If adaptive is given correctly (1 mark) then 'traditional is different' scores 0 marks because there is nothing to say how it is different.</p>	4

Question	Answer	Marks
4(d)	<p><b>Discuss the advantages and disadvantages of adaptive leadership. You should include a conclusion in your answer.</b></p> <p><b>Marks:</b> 1 mark for each advantage/disadvantage (however basic/detailed) <b>which is related/linked</b> to the question (max 4 marks). 1 mark for conclusion.</p> <p><b>Conclusion:</b> any appropriate conclusion drawn from the discussion that has been presented. 1 mark if appropriate. A conclusion is a ‘decision reached by reasoning’ and so a summary of points already made scores 0 marks.</p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <p>Advantages</p> <ul style="list-style-type: none"> <li>• Adaptive leadership is about adapting to changing economic conditions and if the leader can do this, the organisation survives and thrives. If it does not adapt it may ‘go out of business’.</li> <li>• Adaptive leadership involves considering the future rather than ‘the here and now’.</li> <li>• Adaptive leadership involves both reductionist and holist viewpoints</li> <li>• Adaptive leadership involves everyone – workers need to change in the same direction as the organisation</li> </ul> <p>Disadvantages</p> <ul style="list-style-type: none"> <li>• Workers may not be able to change/adapt; they may not have the skills required for the change and become redundant</li> <li>• Workers may experience distress. It can’t be avoided (but it can be managed)</li> <li>• The leader must be adaptive. If not, then the organisation may not survive. How it is known whether a leader is adaptive or not; possesses the relevant skills and abilities.</li> </ul>	<b>5</b>

Question	Answer	Marks
<b>Section B</b>		
5(a)	<p><b>Cognitive-behavioural therapy (CBT) can be used to treat obsessive-compulsive disorder (OCD).</b></p> <p><b>Design a study to test gender differences in effectiveness of CBT administered by telephone for OCD.</b></p> <p><b>Marks:</b> use generic levels of response Design a study question part (a).</p> <p><b>Additional:</b> Candidates should design the study showing evidence of design features appropriate to the named method. The named method: <b>any appropriate method.</b></p> <p><b>Specific features:</b></p> <ul style="list-style-type: none"> <li>• <b>Experiments:</b> type, IV, DV, controls, experimental design.</li> <li>• <b>Observations:</b> type, setting, response categories, sampling frame, number of observers.</li> <li>• <b>Questionnaires/Interviews:</b> type, setting, example questions. Scoring/rating scale, analysis of responses.</li> </ul> <p><b>General features of research methodology:</b> sampling technique and sample, type of data, ethics, reliability, validity, data analysis.</p>	<b>10</b>
5(b)	<p><b>Explain the psychological and methodological evidence on which your study is based.</b></p> <p>Candidates are expected to explain the reasons for the suggested design in part (a). Explanation should be both psychological and methodological. Psychological to include appropriate theory or research.</p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (b). ‘Psychological’ = 4 marks; ‘methodological’ = 4 marks If <b>only</b> methodological or psychological explanation is provided max 5 marks If ‘psychological’ described and <b>not</b> related to part (a) max 2 marks.</p> <p><b>Syllabus:</b> psychological: cognitive (Lovell et al., 2006) and exposure and response prevention (Lehmkuhl et al., 2008)</p> <p><b>Psychological:</b> Lovell et al. (2006) compared the effectiveness of CBT face-to-face with CBT given over the telephone. The conclusion was that there was no difference in effectiveness. However, there may have been an age difference that was not explored. NB: Lovell used BDI.</p> <p><b>Methodological:</b> explanation of method using general and specific features as above.</p>	<b>8</b>

Question	Answer	Marks
6(a)	<p><b>There are several ways to close a sale, including reciprocity and authority.</b></p> <p><b>Design a study to investigate which is the <u>most</u> successful way to close a sale when selling a computer.</b></p> <p><b>Marks:</b> use generic levels of response Design a study question part (a).</p> <p><b>Additional:</b> Candidates should design the study showing evidence of design features appropriate to the named method. The named method: <b>any appropriate method.</b></p> <p><b>Specific features:</b></p> <ul style="list-style-type: none"> <li>• <b>Experiments:</b> type, IV, DV, controls, experimental design.</li> <li>• <b>Observations:</b> type, setting, response categories, sampling frame, number of observers.</li> <li>• <b>Questionnaires/Interviews:</b> type, setting, example questions. Scoring/rating scale, analysis of responses.</li> </ul> <p><b>General features of research methodology:</b> sampling technique and sample, type of data, ethics, reliability, validity, data analysis.</p>	10
6(b)	<p><b>Explain the psychological and methodological evidence on which your study is based.</b></p> <p>Candidates are expected to explain the reasons for the suggested design in part (a). Explanation should be both psychological and methodological. Psychological to include appropriate theory or research.</p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (b). ‘Psychological’ = 4 marks; ‘methodological’ = 4 marks If <b>only</b> methodological or psychological explanation is provided max 5 marks If ‘psychological’ described and <b>not</b> related to part (a) max 2 marks.</p> <p><b>Syllabus:</b> ways to close a sale</p> <p><b>Psychological:</b> Cialdini (1984) suggests there are six strategies: Reciprocity: I’ll give you something (for free) if you give me something (the sale) Commitment and consistency: get the buyer to make a small commitment and they may make a large one. Liking: if people like the salesperson, the store, the image etc, they are more likely to buy. Authority: a product sold by an ‘expert’ is more likely to be bought. Social proof: positive reviews may lead a person to buy. Scarcity and urgency: if it is ‘the last one’ people are more likely to buy.</p> <p><b>Methodological:</b> explanation of method using general and specific features as above.</p>	8

Question	Answer	Marks
7(a)	<p><b>The style of a practitioner’s clothing, the way they dress, can influence what patients think of them.</b></p> <p><b>Design a study gathering qualitative data to investigate why patients prefer one practitioner style of dress to another.</b></p> <p><b>Marks:</b> use generic levels of response Design a study question part (a).</p> <p><b>Additional:</b> Candidates should design the study showing evidence of design features appropriate to the named method. The named method: <b>must include qualitative data.</b></p> <p><b>Specific features:</b></p> <ul style="list-style-type: none"> <li>• <b>Experiments:</b> type, IV, DV, controls, experimental design.</li> <li>• <b>Observations:</b> type, setting, response categories, sampling frame, number of observers.</li> <li>• <b>Questionnaires/Interviews:</b> type, setting, example questions. Scoring/rating scale, analysis of responses.</li> </ul> <p><b>General features of research methodology:</b> sampling technique and sample, type of data, ethics, reliability, validity, data analysis.</p>	10
7(b)	<p><b>Explain the psychological and methodological evidence on which your study is based.</b></p> <p>Candidates are expected to explain the reasons for the suggested design in part (a). Explanation should be both psychological and methodological. Psychological to include appropriate theory or research.</p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (b). ‘Psychological’ = 4 marks; ‘methodological’ = 4 marks If <b>only</b> methodological or psychological explanation is provided max 5 marks If ‘psychological’ described and <b>not</b> related to part (a) max 2 marks.</p> <p><b>Syllabus:</b> non-verbal communications (McKinstry and Wang, 1991)</p> <p><b>Psychological:</b> Study by (McKinstry and Wang, 1991) on patient satisfaction determined by style of dress of practitioner.</p> <p><b>Methodological:</b> explanation of method using general and specific features as above.</p>	8

Question	Answer	Marks
8(a)	<p><b>A machine in your factory has been sabotaged. You know who is responsible and want to find the reason for this unacceptable behaviour.</b></p> <p><b>Design a study using an interview to investigate the reason for sabotaging the machine.</b></p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (a).</p> <p><b>Additional:</b> Candidates should design the study showing evidence of design features appropriate to the named method. The named method: <b>interview.</b></p> <p>Typical features:</p> <ul style="list-style-type: none"> <li>• <b>Questionnaires/Interviews:</b> type, setting, example questions. Scoring/rating scale, analysis of responses.</li> </ul> <p><b>Typical features of research methodology:</b> sampling technique and sample, type of data, ethics, reliability, validity, data analysis.</p>	10
8(b)	<p><b>Explain the psychological and methodological evidence on which your study is based.</b></p> <p>Candidates are expected to explain the reasons for the suggested design in part (a). Explanation should be both psychological and methodological. Psychological to include appropriate theory or research.</p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (b). ‘Psychological’ = 4 marks; ‘methodological’ = 4 marks If <b>only</b> methodological or psychological explanation is provided max 5 marks If ‘psychological’ described and <b>not</b> related to part (a) max 2 marks.</p> <p><b>Syllabus:</b> workplace sabotage (Giacalone and Rosenfeld, 1987)</p> <p><b>Psychological:</b> There are many reasons. Giacalone and Rosenfeld provide eleven: Self-defence, Revenge, An eye for an eye, Protect oneself from boss/company, To protect one's job, The foreman/company deserved it, The foreman/company hurt me previously, No one was hurt by the action, Release of frustrations, Just for fun/laughs. Other reasons are also possible: slowing down or easing the work process, dishonesty, causing chaos or attempting to assert control.</p> <p><b>Methodological:</b> explanation of method using general and specific features as above.</p>	8

Question	Answer	Marks
<b>Section C</b>		
9	<p data-bbox="316 315 1289 416"><b><i>‘Even though Charles was just one child, Rapoport’s case study of Charles’ obsessive-compulsive disorder (OCD) can be generalised to everyone.’</i></b></p> <p data-bbox="316 450 1254 517"><b>To what extent do you agree with this statement? Use examples of research you have studied to support your answer.</b></p> <p data-bbox="316 551 962 584"><b>Marks:</b> use generic levels of response in table C.</p> <p data-bbox="316 618 1217 651"><b>Syllabus:</b> examples and case studies (‘Charles’ by Rappaport, 1989)</p> <p data-bbox="316 685 1177 719"><b>Most likely</b> (any other appropriate responses should be credited):</p> <p data-bbox="316 719 584 752">Can be generalised:</p> <ul data-bbox="316 752 1278 898" style="list-style-type: none"> <li>• Washing behaviour is a common type of OCD</li> <li>• The rituals associated with washing behaviour are common in others.</li> <li>• Comorbidity associated with OCD applies in others.</li> <li>• Treatments undergone with Charles can apply to others</li> </ul> <p data-bbox="316 931 624 965">Cannot be generalised:</p> <ul data-bbox="316 965 1283 1133" style="list-style-type: none"> <li>• People are different and what applies to many people will not apply to all.</li> <li>• Rituals will occur, but they will be different.</li> <li>• Charles was a child and what he can do/not do will be different in an adults (who has to work, for example).</li> </ul>	12

Question	Answer	Marks
10	<p><b><i>‘The findings of experiments of consumer behaviour using eye-tracking have no value because they lack ecological validity.’</i></b></p> <p><b>To what extent do you agree with this statement? Use examples of research you have studied to support your answer.</b></p> <p><b>Marks:</b> use generic levels of response in table C.</p> <p><b>Syllabus:</b> attention and shelf position (Atalay et al., 2012)</p> <p><b>Most likely</b> (any other appropriate responses should be credited): For:</p> <ul style="list-style-type: none"> <li>• Eye tracking is scientific equipment which is reliable.</li> <li>• Data recorded is objective: where the person looks is clear and unambiguous.</li> <li>• Data is quantitative and so comparisons can be made between participants and between studies.</li> <li>• It provides immediate feedback.</li> <li>• It is easy to use requiring no training.</li> </ul> <p>Against:</p> <ul style="list-style-type: none"> <li>• Participants can choose to look in whatever direction they wish – they know their eye movements are being tracked.</li> <li>• There may be cultural differences in where people are socialised to look.</li> <li>• Data is where the participant has looked but it does not provide an explanation of why that person has looked in a particular direction.</li> <li>• Eye tracking is reductionist – product purchase isn’t just based on vision; for some products smell and touch may be important.</li> <li>• It cannot be used with every participant, people with contact lenses or with long eye lashes</li> <li>• Eye movement may be subconscious and difficult to control at all times. Data may not be accurate</li> </ul>	12

Question	Answer	Marks
11	<p><b><i>'If there is any doubt about making a correct diagnosis, a medical practitioner should always decide that an ill person is healthy.'</i></b></p> <p><b>To what extent do you agree with this statement? Use examples of research you have studied to support your answer.</b></p> <p><b>Marks:</b> use generic levels of response in table C.</p> <p><b>Syllabus:</b> practitioner diagnosis: type I and type II errors</p> <p><b>Most likely</b> (any other appropriate responses should be credited): Note: lots of debate about type 1 and type 2 errors and which is which, hence not included in question. Whichever way round a candidate has them, credit should be received. For:</p> <ul style="list-style-type: none"> <li>• It is better to be 'safe than sorry'</li> <li>• More tests can confirm whether the person is ill or not</li> <li>• If diagnosed as ill the healthy person may take medication (but won't do any harm)</li> <li>• Being safe prevents a wrong diagnosis, which can be bad for the patient and bad for the practitioner.</li> </ul> <p>Against:</p> <ul style="list-style-type: none"> <li>• This is an error and errors should not be made. Medical practitioners should get it right.</li> <li>• Assuming illness means the person might be treated for no reason, which could be costly.</li> <li>• If a practitioner gets it wrong the patient might die or sue the practitioner for negligence.</li> </ul>	12

Question	Answer	Marks
12	<p><b><i>‘Organisational commitment can be measured simply by looking at attendance and absenteeism.’</i></b></p> <p><b>To what extent do you agree with this statement? Use examples of research you have studied to support your answer.</b></p> <p><b>Marks:</b> use generic levels of response in table C.</p> <p><b>Syllabus:</b> measuring organisational commitment (Mowday et al., 1979); absenteeism (Blau and Boal, 1987)</p> <p><b>Most likely</b> (any other appropriate responses should be credited):</p> <p>Can:</p> <ul style="list-style-type: none"> <li>• High attendance is an indicator of organisational commitment</li> <li>• Low attendance/absenteeism is an indication of a lack of commitment.</li> <li>• Normative absenteeism shows a predictable pattern and low organisational commitment</li> <li>• Calculative absenteeism means the worker ‘takes advantage’ and is absent the maximum number of days before sanctions can be applied (low organisational commitment)</li> </ul> <p>Cannot:</p> <ul style="list-style-type: none"> <li>• Absenteeism may be for other reasons, such as medical or family reasons</li> <li>• Absenteeism statistics do not give a reason for the absence.</li> <li>• There are many more things that a worker can offer to show commitment: amount of non-paid overtime; willingness to help – more than just attending.</li> </ul>	12
