Paper 4 Theory (Extended)

May/June 2021

MARK SCHEME

Maximum Mark: 80

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **9** printed pages.

PUBLISHED**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

1 Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.

2 The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.

3 Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).

4 The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

5 'List rule' guidance

For questions that require *n* responses (e.g. State **two** reasons ...):

- The response should be read as continuous prose, even when numbered answer spaces are provided.
- Any response marked *ignore* in the mark scheme should not count towards *n*.
- Incorrect responses should not be awarded credit but will still count towards *n*.
- Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.
- Non-contradictory responses after the first *n* responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Question	Answer	Marks								
1(a)(i)	filament ;	1								
1(a)(ii)	<i>any two from:</i> smaller ; lighter ; smooth / not spiky ;	2								
1(b)	<table border="1" data-bbox="338 448 524 874"> <tr><td>germinates yes / no</td></tr> <tr><td>(yes)</td></tr> <tr><td>no</td></tr> <tr><td>no</td></tr> <tr><td>no</td></tr> <tr><td>yes</td></tr> </table> ; <i>all needed for 1 mark</i>	germinates yes / no	(yes)	no	no	no	yes	1		
germinates yes / no										
(yes)										
no										
no										
no										
yes										
1(c)	<table border="1" data-bbox="338 1010 1516 1273"> <thead> <tr> <th>feature</th> <th>adaptation to function</th> </tr> </thead> <tbody> <tr> <td>stomata</td> <td>(small pores used for gas exchange)</td> </tr> <tr> <td>(spongy mesophyll layer)</td> <td>air spaces for gas exchange</td> </tr> <tr> <td>palisade (mesophyll cells)</td> <td>(contain large numbers of chloroplasts for photosynthesis)</td> </tr> </tbody> </table>	feature	adaptation to function	stomata	(small pores used for gas exchange)	(spongy mesophyll layer)	air spaces for gas exchange	palisade (mesophyll cells)	(contain large numbers of chloroplasts for photosynthesis)	3
feature	adaptation to function									
stomata	(small pores used for gas exchange)									
(spongy mesophyll layer)	air spaces for gas exchange									
palisade (mesophyll cells)	(contain large numbers of chloroplasts for photosynthesis)									

Question	Answer	Marks
2(a)(i)	(l) (l) (g) ;	1
2(a)(ii)	(at the positive electrode) <u>bromide</u> ions ; lose electrons ; (at the negative electrode) lead ions gain electrons ; lead ions gain <u>two</u> electrons ;	4
2(b)	less than 373(°C) ;	1
2(c)	inert ;	1
2(d)	the temperature is below the melting point of magnesium oxide / the apparatus is not hot enough to melt magnesium oxide / magnesium oxide remains a solid ; so the ions are fixed in position (cannot move) / so electricity cannot flow though the material / so electrolysis cannot occur / needs to be aqueous or molten to conduct ;	2

Question	Answer	Marks
3(a)(i)	ultraviolet ;	1
3(a)(ii)	reflected / absorbed (by sunscreen) ;	1
3(b)	$p = F / A$; $A = 2 \times 155 (= 310) \text{ cm}^2 = 0.031 \text{ m}^2$; $F = mg = 75 \times 10 = 750 \text{ N}$; $p = 750 / 0.031 = 24\,194 / 24\,200 \text{ (Pa)}$;	4
3(c)(i)	height = area under graph = $\frac{1}{2} \times 0.60 \times 5.4$; = 1.6(2) (m) ;	2
3(c)(ii)	acceleration = change in speed / time = $5.4 / 0.60$; = 9.0 (m/s ²) ;	2

Question	Answer	Marks
4(a)(i)	right ventricle labelled ;	1
4(a)(ii)	contracts ; to push / pump, blood out of heart ;	2
4(b)(i)	34 years and under ;	1
4(b)(ii)	coronary heart disease increases with age ; more men than women have coronary heart disease (in each age group) ;	2
4(c)(i)	<i>any two from:</i> genetic predisposition ; stress ; smoking ;	2
4(c)(ii)	high fat diet ; cause blockage of coronary artery ;	2

Question	Answer	Marks
5(a)	<i>the element in Group VII Z ; the two elements which form negative ions X ; and Z ; (either order) the metallic element Y ; the element with the highest proton number X ;</i>	5
5(b)(i)	W = carbon ; Z = fluorine ;	2
5(b)(ii)	two shared electrons in each of four bonds ; three lone pairs on each atom of Z ;	2

Question	Answer	Marks
6(a)(i)	ammonia ;	1
6(a)(ii)	ammonia ;	1
6(a)(iii)	(thermal conductivity greater due to) transfer by (delocalised) electrons ;	1
6(b)	$f = v / \lambda = 3 \times 10^8 / 546 \times 10^{-9}$; $= 5.49 \times 10^{14} / 5.5 \times 10^{14}$; Hz ;	3
6(c)(i)	thermal ;	1
6(c)(ii)	175 W = 175 J / s / energy = power \times time ; 8 hrs = 8 \times 3600 = 28800 s ; (total energy =) 175 \times 28800 = 5040000 (J) ;	3

Question	Answer	Marks
7(a)(i)	40 ($^{\circ}$ C) ;	1
7(a)(ii)	both enzymes increase in activity with increase in temperature ; decrease in activity with increase in temperature over a certain point ; enzyme B is more active at higher temperatures ;	3
7(a)(iii)	enzymes denature / shape of active site changes ; substrate no longer fits into active site ;	2
7(b)	breaks down, fats / lipids / oils ; forms fatty acids and glycerol ;	2
7(c)	$6 \text{ (O}_2\text{)} + \text{C}_6\text{H}_{12}\text{O}_6 \rightarrow 6 \text{ H}_2\text{O} + 6 \text{ (CO}_2\text{)} \text{ ;;}$ <i>all five answers = 2 marks</i> <i>3 or 4 correct = 1 mark</i> <i>1 or 2 correct = 0 marks</i>	2

Question	Answer	Marks
8(a)(i)	contain hydrogen and carbon ; only ;	2
8(a)(ii)	unsaturated has (carbon to carbon) double bond ;	1
8(b)(i)	addition ;	1
8(b)(ii)	double bonds break (to form a polymer) ;	1
8(b)(iii)	ethane does not have a double bond ;	1
8(c)	$C_2H_4 + 3 O_2 \rightarrow 2 CO_2 + 2 H_2O$ one mark for H_2O ; balanced dependent on correct formulae ;	2

Question	Answer	Marks
9(a)(i)	friction ;	1
9(a)(ii)	electrons ;	1
9(a)(iii)	tyres made of rubber ; (rubber is) an insulator ;	2
9(b)(i)	$Q = It = 0.015 \times 0.3 / 1000 ;$ $= 0.000\ 004\ 5\ (C) ;$	2
9(b)(ii)	$V = IR = 0.015 \times 40\ 000 (= 600\ V) ;$	1
