Paper 1

**October/November 2019**

MARK SCHEME

Maximum Mark: 100

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2019 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

---

This document consists of **23** printed pages.

**PUBLISHED****Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

| <b>Question</b> | <b>Answer</b>  | <b>Marks</b> |
|-----------------|--|--------------|
| 2(a)            | C;   | <b>1</b>     |
| 2(b)            | D;   | <b>1</b>     |
| 2(c)(i)         | reduced germination;<br>slowed growth;<br>water stress;<br>excess transpiration;<br>wilting;<br>enzymes denatured;<br>seedlings die;   | <b>2</b>     |
| 2(c)(ii)        | <p><i>Accept any relevant method and an explanation of this method, for example:</i></p> <p>mulching / the placing of a layer of plastic / leaves / bark / grass cuttings on soil surface;<br/>to reduce water loss from the soil;</p> <p>minimum tillage / cultivation / very little digging / raking done;<br/>to preserve soil surface;</p> <p>under sowing / planting a second crop in spaces between the primary crop;<br/>to maintain crop cover;</p> <p>shade / prevent sunlight reaching the soil;<br/>reduces heating from the Sun;</p> <p>cover crops / planting belts;<br/>binds soil / slows the flow of water etc.;</p> <p>irrigation / supplying water / replace (excess) water loss;<br/>cools plant / maintains cellular reactions / for transpiration / for photosynthesis;</p> | <b>2</b>     |
| 2(d)            | effect on flowering / reduced pollination / reduced water availability / fruit damage / soil heaving pushes out plants / breaks roots / destroys tissues / cells / ice crystals form in cells / cells burst / plants die;  | <b>1</b>     |

**PUBLISHED**

| <b>Question</b> | <b>Answer</b>   | <b>Marks</b> |
|-----------------|---|--------------|
| 3(a)            | root hairs;<br>vascular tissue;<br>stomata;   | <b>3</b>     |
| 3(b)            | higher humidity reduces rate of transpiration;<br>because of lower concentration gradient / water gradient / the water evaporates more slowly (into saturated air);<br><br>increased wind speed increases rate of transpiration;<br>because water is removed from leaves more easily / the boundary layer of saturated air is removed from the leaf surface / maintains concentration gradient / by removing water molecules; | <b>4</b>     |
| 3(c)            | low levels of oxygen / aeration in root zone / anaerobic conditions;<br>reduced (aerobic) root respiration;<br>anaerobic root respiration increases;<br>root tissues decompose / rot / roots die;<br>increase in certain pests / diseases, e.g. snails and fungus which damage roots;<br>poor / slow / low / shallow growth of root;  | <b>2</b>     |

| Question | Answer  | Marks    |
|----------|---|----------|
| 4(a)     | <p><i>Accept activities up to planting point, for example:</i><br/> cut down trees;<br/> stumping;<br/> burning;<br/> weed removal;<br/> remove large stones;<br/> cultivate, e.g. plough / dig / turn soil over;<br/> prepare seedbed, e.g. rake / harrow / create fine tilth / level;<br/> drill (for appropriate crop) / prepare holes / pockets to receive seeds / plants;<br/> add fertiliser / manure to seedbed;<br/> pesticide to seedbed / drills;<br/> irrigate;<br/> ensure correct pH / lime;</p> | <b>3</b> |
| 4(b)(i)  | <p><i>No mark for crop.</i><br/> sign of crop being ripe, e.g. yellow / brown;<br/> hard / dried up for cereal;<br/> texture / softness of crop;<br/> flavour / taste of crop;<br/> size of crop;<br/> sugar content;<br/> tops may die down;</p>   | <b>2</b> |
| 4(b)(ii) | <p><i>cool:</i><br/> low temperature prevents germination / growth / remains dormant / fresh / reduces respiration / prevents drying out / avoids the outbreak of pests / diseases;</p> <p><i>dry:</i><br/> lack of water so does not rot / prevents fungi / microbe growth restricted / does not germinate / sprout;</p>   | <b>2</b> |
| 4(c)     | <p>product related to named crop;<br/> e.g. wheat – flour;<br/> maize – porridge;</p>   | <b>1</b> |

| <b>Question</b> | <b>Answer</b>   | <b>Marks</b> |
|-----------------|---|--------------|
| 5(a)(i)         | B;  | <b>1</b>     |
| 5(a)(ii)        | B;  | <b>1</b>     |
| 5(b)(i)         | <i>Accept any named boring pest, e.g.:</i><br>weevil / stalk borer / American bollworm;   | <b>1</b>     |
| 5(b)(ii)        | weaken plant;<br>plant falls down / tissue damaged;<br>plant dies;<br>plant loses water;<br>reduced photosynthesis / reduced growth rate;<br>water / sap-bearing tissue destroyed / loss of sap;<br>site for entry of pathogens / diseases / pests;   | <b>3</b>     |
| 5(c)            | organic status;<br>to protect (other) crops;<br>to protect beneficial insects;<br>farming philosophy / to avoid pollution;<br>cost of chemical / equipment;<br>lack of expertise / knowledge;<br>lack of availability of specialist equipment;<br>availability of chemicals;<br>danger to farmer / staff;<br>legislation / local rules / schemes prevent use; | <b>2</b>     |

| <b>Question</b> | <b>Answer</b>   | <b>Marks</b> |
|-----------------|---|--------------|
| 6(a)            | 4 types of / named crops / or a fallow period;<br>suitable order for crops over time described;   | <b>2</b>     |
| 6(b)            | <i>explanation:</i><br>fertiliser containing more than one nutrient;<br><i>example:</i><br>NPK;<br><i>Allow named example and ratios.</i>   | <b>2</b>     |
| 6(c)            | correctly labelled axes with appropriate scale;<br>points plotted correctly;<br>line of best fit;<br><i>Accept a curved line of best fit, accept a line that ignores outlier.</i> | <b>3</b>     |

| Question | Answer  | Marks    |
|----------|---|----------|
| 7(a)     | <p><i>For example:</i><br/>           hair loss;<br/>           discoloured / cloudy urine;<br/>           faeces contains blood / worms / sticking to coat;<br/>           watery / dull / sunken eyes;<br/>           rib cage stands out;<br/>           poor stance / head down / drooping;<br/>           cough / sneeze / nasal discharge;<br/>           panting / breathing fast;<br/>           change in nasal moisture;<br/>           lethargy;<br/>           no appetite / won't eat;<br/>           isolated;<br/>           erratic behaviour / aggression;<br/>           weight loss;<br/>           rough coat;<br/>           high temperature;<br/>           some animals die unexpectedly;<br/>           lack of libido / mating;</p> | <b>3</b> |
| 7(b)     | <p><i>Credit relevant descriptions of transfer, for example by:</i><br/>           secretions;<br/>           lesions;<br/>           spores;<br/>           licking;<br/>           rubbing;<br/>           food;<br/>           water;<br/>           walls;<br/>           troughs;<br/>           droplet contact / coughing / sneezing;<br/>           air;<br/>           faecal / oral;<br/>           vectors;</p>  | <b>2</b> |
| 7(c)     | must by law be reported to ministry / vet / authorities etc.;   | <b>1</b> |

| <b>Question</b> | <b>Answer</b>   | <b>Marks</b> |
|-----------------|---|--------------|
| 7(d)            | remove infectious agents;<br>remove waste / faeces / urine;<br>reduce pest / disease burden;<br>regular cleaning of walls / floors / where animal lives;<br>supply of clean water / food;<br>use of disinfectants / iodine dip / foot baths;<br>clean bedding;<br>handler cleanliness / protective clothing / change clothes;<br>cleanliness of equipment;<br>isolate sick animals;<br>regular checks / record keeping;<br>keeping area dry;<br>provide good ventilation;<br>reduce vermin; | <b>3</b>     |

| Question | Answer  | Marks    |
|----------|---|----------|
| 8(a)     | <p><i>1 mark for each correct labelling of:</i><br/> caecum;<br/> large intestine;<br/> rumen;<br/> small intestine;</p>  | <b>4</b> |
| 8(b)     | <p><i>caecum:</i><br/> absorb fluids / salts;<br/> mixes contents;<br/> receives undigested material from the small intestine and passes to the large intestine;<br/> lubrication with mucus;<br/> contains (specialised) microorganisms;</p> <p><i>large intestine:</i><br/> absorption of water;<br/> passes waste (to the rectum / anus);</p> <p><i>rumen:</i><br/> mechanical processing / churning;<br/> storage prior to regurgitation;<br/> fermentation;<br/> fibre breakdown;<br/> contains (specialised) microbes;</p> <p><i>small intestine:</i><br/> digestion;<br/> nutrient absorption / absorption of named nutrient;<br/> receives secretions (from the pancreas and the gall bladder);</p> | <b>4</b> |
